useit® -Superpad P

useit-abrasives® - this brand name stands for high-quality sanding. The patented useit®-Superpad P will solve your sanding problems when working with many different types of material and guarantees optimum surfaces.

An innovative design

In contrast to conventional sanding pads, useit®-Superpad P is perforated across its entire surface. This allows the sanding dust that is produced to be removed by suction permanently and across the entire surface. Sanding is almost dust-free. The likewise patented Velcro-type system on the rear side of the sanding medium allows the sanding dust to be removed between the backing plate and the sanding disc, thereby significantly reducing the amount of dust at the workplace.

Optimum sanding results

With its perforations, useit®-Superpad P particularly prevents clogging. This keeps contact and removal to the optimum.

Effective working

useit®-Superpad P has up to four times more sanding capacity compared with conventional perforated sanding media. This allows a shorter sanding time and more effective working.

A universal solution

useit®-Superpad P not only has revolutionary properties, it also fits on all manual sanders, with or without suction removal.
